

## Lyncée Tec SA

Lyncée Tec SA (Lausanne, Switzerland) has introduced a new family of Digital Holographic Microscopes (DHM) called DHM-R1000 for non-contact and non-invasive optical measurements that provide nanometric resolution, real-time reporting, ease of use, robustness and stability.

They are based on a patented technology, and are used in R&D laboratories and for quality control in manufacturing process for both material and life sciences

applications. Applications of DHM-R1000 are in life science, nanotechnology, semiconductors, MEMS/MOEM or micro-optics. The characteristics of DHM make it a unique solution to follow up the whole development cycle of a product, from innovative R&D to quality control in production line, passing through the quantitative optimisation of the manufacturing process.
